

PHARMECOLOGY[®] WM

Over 20 years ago, WMSS's PharmEcology Services began with one goal in mind, to assist the healthcare community in addressing their pharmaceutical waste challenges. Today, our system has spread across the country, and we now support many of the largest healthcare organizations in the U.S. Our programs offer regulatory compliance at the federal and state level and our customized approach for hazardous waste management is unique in the industry.

It is well known that hazardous pharmaceutical waste is one of the most expensive waste streams disposed by healthcare facilities. Based on the experience of other PharmEcology customers, the ongoing savings realized from a reduction in hazardous pharmaceutical waste disposal costs will off-set the cost of PharmEcology's implementation program.

PharmEcology's customized pharmaceutical waste program will reduce costs associated with the over classification of waste through precise categorization at the finished dosage form level. The program will then identify recommendations for pharmaceutical waste containers to standardize and eliminate unnecessary waste streams, develop a compliant and user-friendly implementation strategy that is sustainable for staff, and provide customized training by department, yielding substantial cost savings in the disposal of pharmaceutical waste.

PharmEcology's program is not dependent on any particular waste disposal vendor or pharmaceutical waste collection container. We have worked with every waste disposal vendor in the industry and can optimize the use of any pharmaceutical waste collection containers you select. The savings you will realize are driven by PharmEcology's optimization of the waste streams your organization generates for disposal, not the vendor you select to dispose of the waste or the container selection.

Are you ready for USP <800>?

USP <800> will become compendially applicable and enforceable on November 1, 2023. Effective on January 1, 2024, The Joint Commission will incorporate USP Chapter <800> standards within its survey process. Does your healthcare organization have a compliant USP <800> program?

PharmEcology understands USP Chapter <800> is challenging because of its many requirements, one of those being the Assessment of Risk when handling hazardous drugs. By partnering with PharmEcology, your organization can meet those challenges head-on and create solutions to manage your hazardous drugs confidently, and provide safe handling practices of hazardous medications for your staff, and the patients that you serve.

PharmEcology's USP <800> Assessment of Risk Program includes data analysis, customization of your organization's Personal Protective Equipment (PPE) requirements, tools to assist in meeting the compliance standards of USP Chapter <800>, **an online portal to access this data, and tools** and virtual support to initiate and sustain your progress.

Partner with the nation's leading and most recognized provider of customized hazardous waste and hazardous drug solutions to the healthcare industry and remove the uncertainty of your pharmaceutical waste and hazardous drug decisions.
